

Ein SSP-Workflow mit Open Science-Modulen für Open Access-Publikationen

The screenshot shows the website for Europe's Journal of Psychology (EJOP). The header includes the PsychOpen GOLD logo and navigation links. The main content area features the EJOP logo and a description: "Quarterly electronic publication of scientific psychology featuring original studies, research, critical contributions, interviews and book reviews written by and intended for psychologists worldwide." Below this, it lists various indexing services like Scopus, PubMed, and DOAJ. A "Recent Articles" section lists several papers with their authors and dates. A "Most Viewed Articles" section highlights popular pieces. On the right, there is a "Volumes" list from 2017 to 2021 and a "Tweets by @PsychOpen" section featuring a tweet about PsychOpen CAMA, an open repository for meta-analytic data.

### Submission Guidelines for Supplementary Materials in PsychArchives

#### Information for Users

- 1) Preparation of files
- 2) Submission process

### General Guidelines

PS is published under the PsychOpen GOLD program, and thus all submissions must adhere to the [Author Guidelines](#) set forth under that program. Please carefully consult the materials compiled there and make sure your submission complies with the guidelines. The [PsychOpen Style Guide](#) compiles most important standards and gives various examples. Please follow it closely when writing and formatting your paper. Further, we ask that you use **APA 7 formatting** (for more information, see [here](#)).

### Guidelines for Specific Paper Categories and Types

PS currently features 5 *categories* of papers (Theory, Methodology, Empirical, Applied, Comment) and eight special *types* of papers (State of the Art Review, Tutorials, Projects & Data, Insights & Ideas, Cumulative Blitz Report, Registered Report, Replication, Meta-analysis). Further details and requirements (e.g., word counts) on these categories and types of papers can be found at [Paper Formats](#). Papers should adhere to the word, reference, table, and figure counts for each category and type of paper. Additionally, some papers may be part of *bundled paper collections* (Theme Bundles, Controversy Exchange). Lastly, papers may have been *invited* by the editorial team or submitted *without an invitation*. Taken together, authors need to clearly indicate the type, (lack of) category, (lack of) bundle, and (lack of) invitation on the official PS Paper Template so that the paper can be properly classified and allocated.

### Guidelines for Openness and Transparency

Under the umbrella of the European Association of Personality Psychology (EAPP), PS is committed to transparency and openness just like its sister-journal, the *European Journal of Personality* (EJP). Specifically, PS implements Transparency and Openness Promotion (TOP) guidelines corresponding to Levels II and III. Details can be found at [Open Science](#) on this website, and all papers published in PS must comply with these guidelines. Correspondingly, authors will be asked in the AIF to what extent they comply with, and have implemented, these guidelines in their papers in the journal submission system. Open materials, data, and scripts as well as pre-registrations need to be linked to in the paper (see details below under *Guidelines for Supplements*). These are intended to be also peer-reviewed.

### Guidelines for Supplements

To permanently host supplements to papers, PS partners with [PsychArchives](#) which is a disciplinary repository preserving a variety of digital research objects (DROs), with different publication types (preprints, primary, and secondary publications), research data, tests, pre-registrations, multimedia, and code. It provides easy and free access to DROs according to the FAIR principles, which implies the commitment to ensure that research and research data are *findable, accessible, interoperable, and reusable*. **During initial submissions, supplements can be accessible on any repository of your choice; once your paper has been conditionally accepted, you will need to upload all supplements (with descriptions in a Supplements & Badges template form) to the journal submission system as they will be later uploaded to PsychArchives by journal staff.**

### Guidelines for Ensuring Anonymized Reviews (if Wished)

PS offers authors the possibility to remain anonymous or identify themselves in the reviewing process. The journal submission system *only* requires information on the submitting author (which is understood to be the corresponding author of the paper), and this information is by default not shared with reviewers. All other authors do not need to be entered into the system. If you wish to identify yourself to the reviewers, then you may include the author names in the Paper Template and do not need to attend to the anonymization issues below. However, if you wish to remain anonymous, you should of course not include author names in the Paper Template and additionally need to take following steps regarding the manuscript text and file properties:

### Guidelines for Reporting Standards

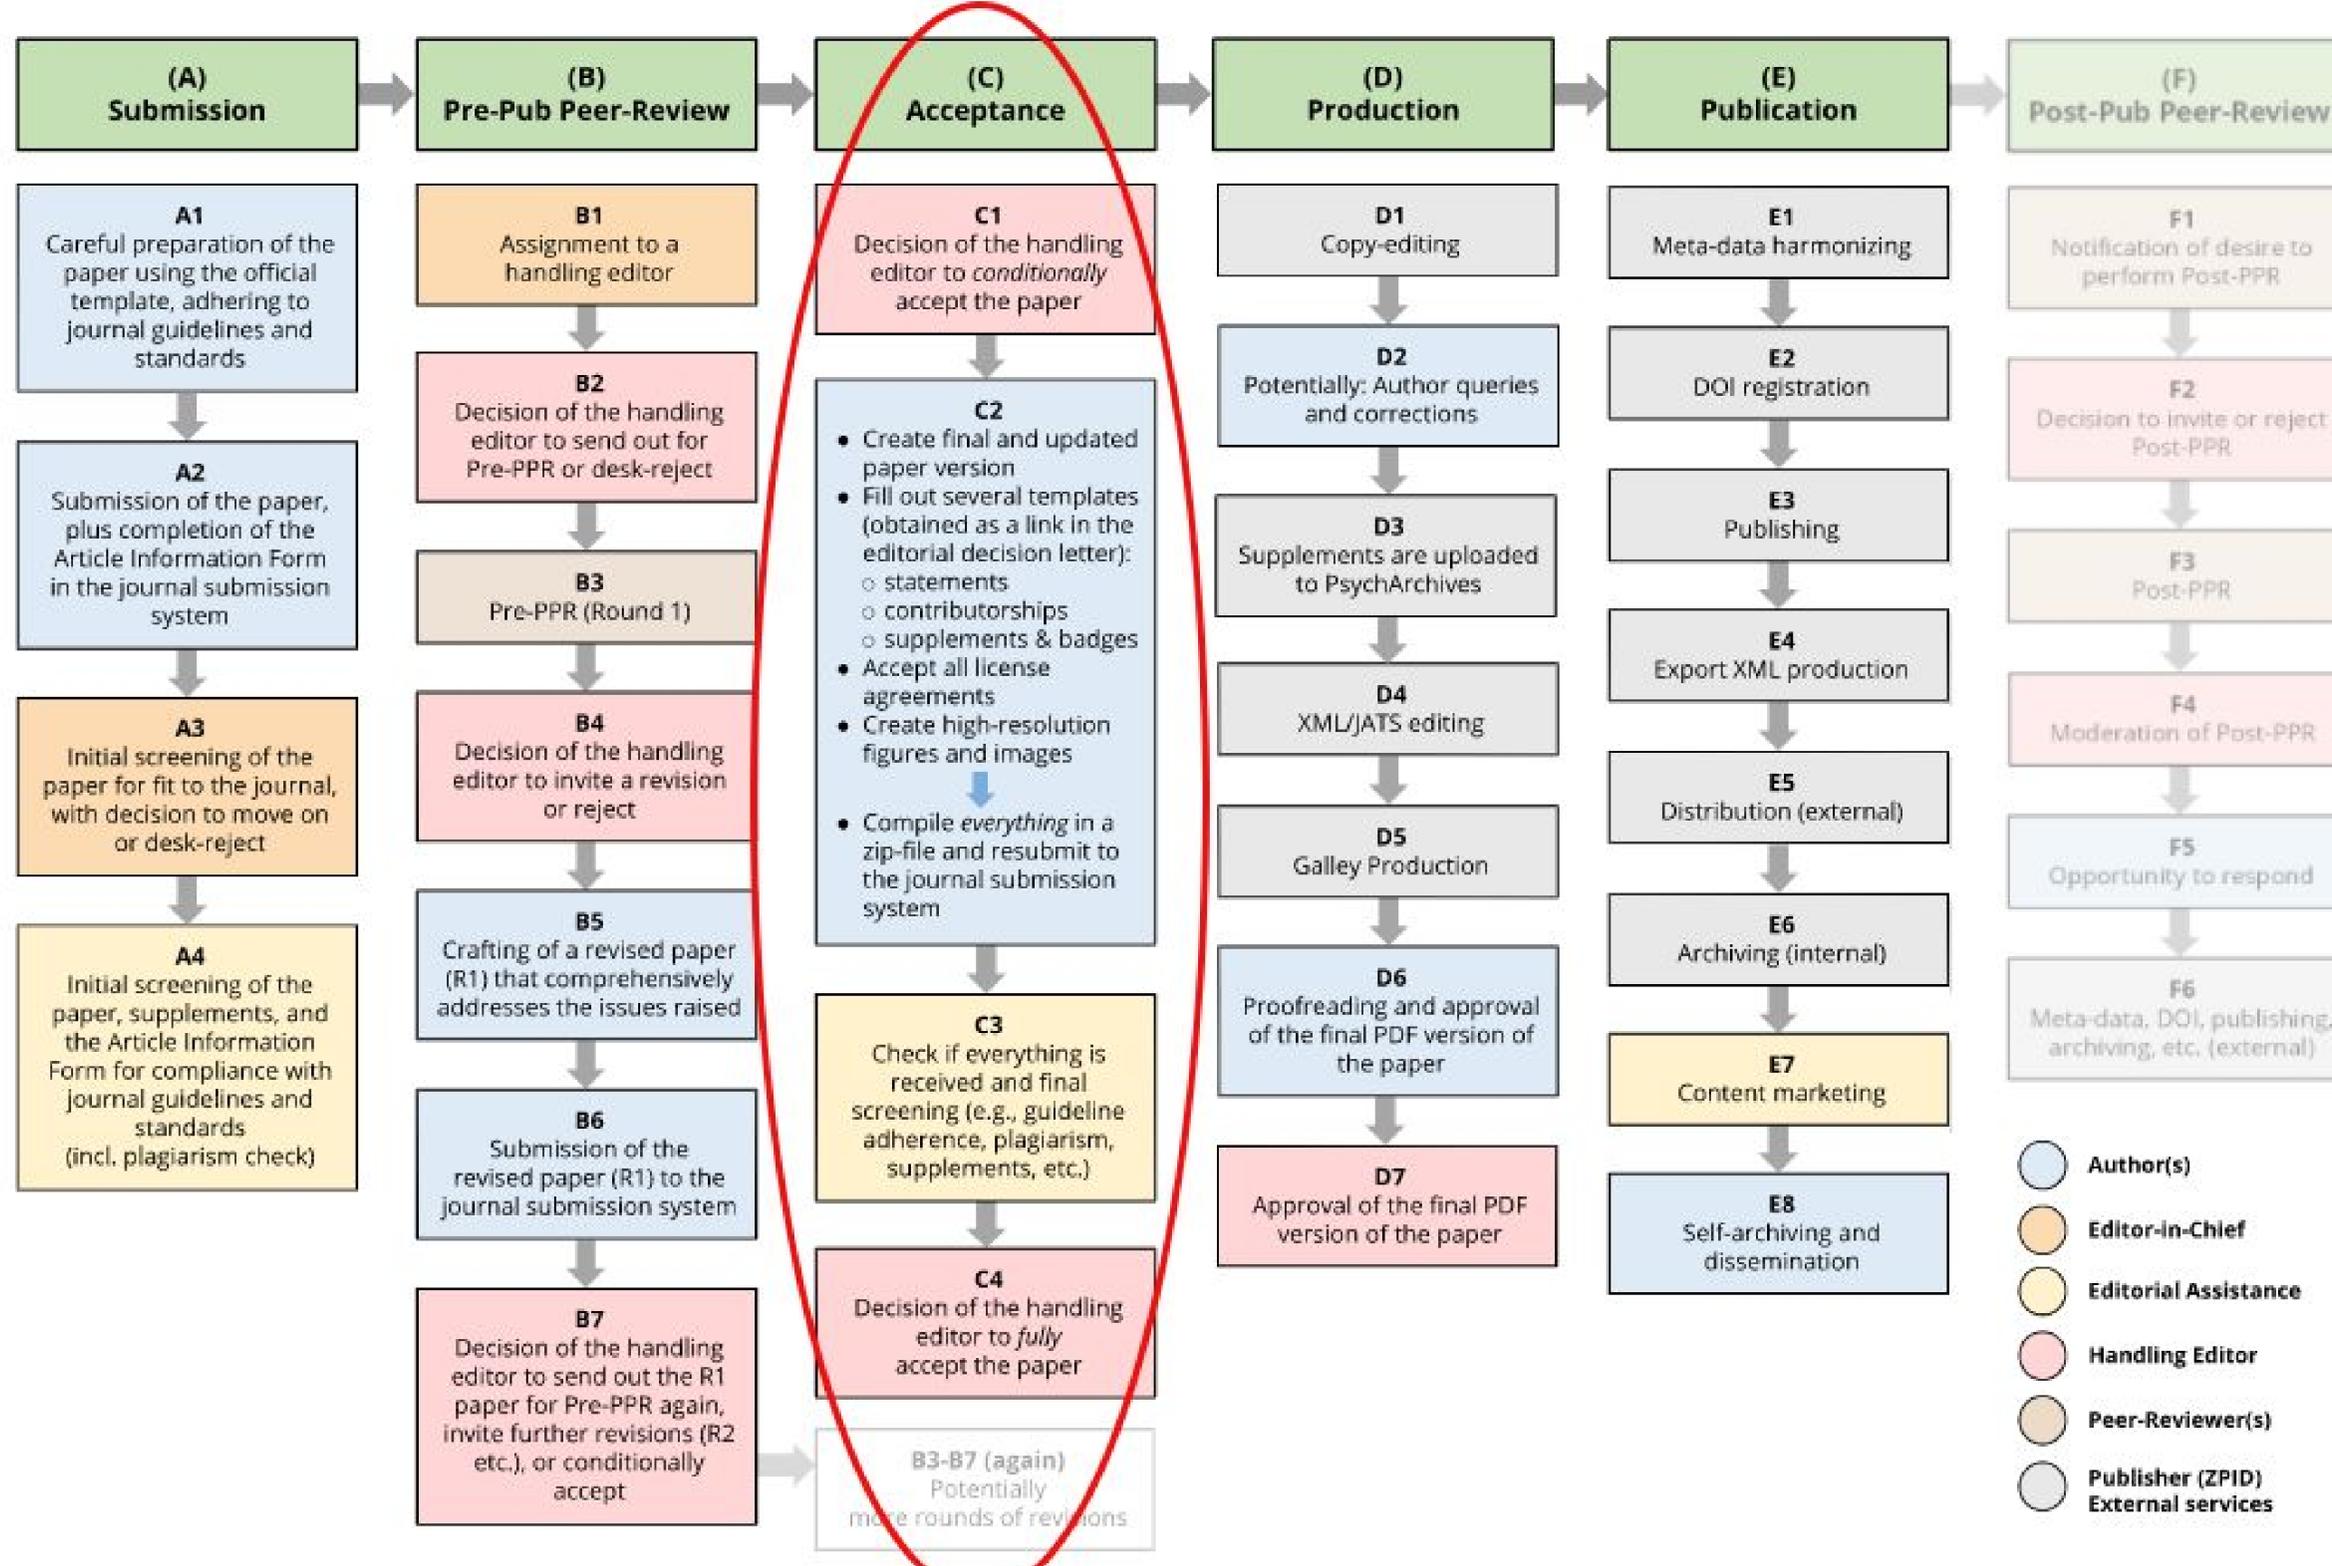

PS strongly recommends that authors follow the journal reporting standards (JARS) set forth by the American Psychological Association (APA). The JARS fall into three categories that will likely cover most if not all empirical papers submitted to PS: [JARS-Quant](#) for quantitative data, [JARS-Qual](#) for qualitative data, and [JARS-Mixed](#) for mixed-methods combining quantitative and qualitative data.

## Submission Preparation Checklist

As part of the submission process, authors are required to check off their submission's compliance with all of the following items, and submissions may be returned to authors that do not adhere to these guidelines.

- ✓ **Article Information Form:** The online journal submission system contains an Article Information Form (AIF) that is devised to replace the cover letter, gather standardized information on each submission at one glance, and alert authors to the guidelines and standards of the journal (especially regarding empirical contributions). Its full and honest completion in the submission system is mandatory. To prepare yourself for the online completion, you can find an overview of AIF items [here](#).
- ✓ **Mandatory Template Use:** The official PS Paper Template should be used when submitting to *Personality Science* (download it [here](#)). After a conditional acceptance of the paper, authors receive three additional template forms: Contributorships; Statements (on funding, competing interests, other manuscript versions, ethics, acknowledgements, other notes); Supplements & Badges. These forms need to be filled out fully and correctly and uploaded together with everything else to the journal submission system. Only submissions using official PS templates will be processed.
- ✓ **zip-File after Conditional Acceptance:** If your paper has been conditionally accepted, then please submit a zip-file containing the updated, final version of the manuscript; fully completed Contributorship, Statements, and Supplements & Badges template forms; all supplements files; and any high-resolution images (if figures are included in the paper). Notably, all of these files should be included in *one* zip-file that will be the basis for the final acceptance.
- ✓ **Original Article:** The submission has not been previously published, nor is it currently submitted to another journal for consideration (or an explanation will be provided in "Comments for the Editor"). Prior to as well as after publication in *Personality Science*, authors may make their submissions available as *preprints* on personal or public websites. *Note: Personality Science* uses Similarity Check, a plagiarism screening service, to screen submitted content for originality.
- ✓ **Author Agreement:** All authors have contributed substantially to the submitted manuscript; have read and approved of the version submitted; have agreed to the order of authorship and the type of contributorship; and will be informed by the submitting (and corresponding) author.
- ✓ **Authorship and Contributorship Information:** The journal submission system *only* requires information on the submitting author, which is understood to be the corresponding author of the paper. All other authors do not need to be entered into the system. If the authors wish, they could identify themselves by inserting their names into the appropriate boxes within the official PS Paper Template (which is sent out for review). If a paper is conditionally accepted, then a mandatory Contributorship Template needs to be filled out where information on all authors is provided, including their respective contributorships (according to the [CRediT System](#)). Contributions that fall short of authorship are mentioned in the Acknowledgments section of the Statements Template (for criteria of authorship, see the [Ethical Principles of Psychologists and Code of Conduct](#), Standard 8.12, Publication Credit, of the American Psychological Association). Responsibility for authorship decisions lies entirely with the authors.
- ✓ **Paper Category and Type:** The category (Theory, Methodology, Empirical, Applied, Comment) and Type (None, State of the Art Review, Tutorial, Projects & Data, Cumulative Blitz Report, Insights and Ideas, Registered Report, Replication, Meta-analysis) of the paper are clearly indicated in the official PS Paper Template.
- ✓ **Counts:** The paper follows the recommended word, reference, table, and figure counts (see [Paper Formats](#)), or a compelling justification for upward deviations is provided in the submission process.
- ✓ **Abstract, Keywords, Key Insights, Relevance, Plain Language:** An abstract (max. 150 words) with up to 8 keywords, bulleted list of Key Insights (3-5 points, max. 10 words each), and a Relevance Statement (250 characters) are provided. If wished, a second abstract in another language (max. 150 words), also with up to 8 keywords, can be added in another language. Optionally,

To whom it may concern,

I tried to register as a new user for the Journal of Numerical Cognition. I received a confirmation email of my journal registration username and password. However, I have not received an email with instructions for how to validate my email address. The site is giving me an error and not letting me login with my username and password because my email is not validated.

Any assistance with this matter is greatly appreciated!

respected editorial team

I want to know the procedure for publishing my research paper in your journal

I wonder if there is some problem with my registration or whether I should wait for my email account to be validated (although I already received an email from you).

Could you please help me clarify?

I try to register but it does not leave me for not having validated my email ([myemail.com](mailto:myemail.com)). What I can do?

Betreff **Help**

An [psycst.support@psychopen.eu](mailto:psycst.support@psychopen.eu) ★

I am trying to register to psycst.psychopen but it seems so difficult. I fulfill all the asked information than it says that my e-mail address is already in use.

When I try to login it doesn't recognize my password and it doesn't send me any confirmation email for forgetting the password.

Can you help me ? thank you

## Mistrust and Misinformation: A Two-Component, Socio-Epistemic Model

Joseph M. Pierre

### Abstract

Although conspiracy theories are endorsed by about half the population and have become a dominant theme in contemporary political discourse, psychological research to date has focused primarily on a deficit model. Alternatively, a two-component, socio-epistemic model of conspiracy theory endorsement is proposed, with variance along a continuum, and the inconsistency of research findings like underlying conspiracist ideation that manifests as the rejection of authority. This model is understood as a sociocultural response to breaches of trust, inequities of power, and the resulting epistemic vacuum that can send individuals "down the rabbit hole" into a world of misinformation within an increasingly "post-truth" world. The two-component model of mistrust and misinformation processing, with interventions for individuals, institutions, and society, is discussed.
